

How to test/use an audio jack reader? (Shuttel UniMag, UniPay)

I have an audio jack reader and I want to swipe a card and see the results. What do I do?

The ID Tech audio jack reader is supported as a mobile device accessory on the iOS, Android, Windows mobile, and blackberry platforms. Many application providers have written and distributed applications for these readers. ID TECH provides a demo application to prove reader functionality /compatibility.

Please visit the iTunes app store for the UniMag Reader app, select the appropriate type. By default this app uses the Shuttle as its reader type.

The Google Play Store has a few apps supporting the Unimag and a Universal SDK Demo supporting the UniPay and other devices.
